

## Homework Assignment #1: An Exercise on Using Git

### Due Date

10PM Wednesday, October 10, 2012.

### Note

The purpose of this little exercise is for you to get familiar with the distributed version control system Git. An individual repository, initially containing a file `hw1.txt`, on the Git server will be created for you. You will receive an email regarding this repository from the TA. Email us if there is a problem.

### Task Description

Do the following:

1. Check out from your individual directory the file `hw1.txt`, update it (see instructions in the file), and check it in back to the same repository.
2. Create a new file `hw1a.txt`, write up one paragraph in the file describing the main difficulty/bottleneck (if any) in learning Git, and check it in to your individual repository on the server.
