#### Introduction

- It is not necessary to design the steps required to solve a problem from scratch.
- 😚 It is sufficient to guarantee the following:
  - 1. It is possible to solve one small instance or a few small instances of the problem. (base case)
  - 2. A solution to every problem/instance can be constructed from solutions to smaller problems/instances. (inductive step)

< ロ > < 同 > < 三 > < 三

# **Evaluating Polynomials**

#### Problem

Given a sequence of real numbers  $a_n$ ,  $a_{n-1}$ ,  $\cdots$ ,  $a_1$ ,  $a_0$ , and a real number x, compute the value of the polynomial

$$P_n(x) = a_n x^n + a_{n-1} x^{n-1} + \cdots + a_1 x + a_0.$$

Yih-Kuen Tsay (IM.NTU)

# **Evaluating Polynomials**

#### Problem

Given a sequence of real numbers  $a_n$ ,  $a_{n-1}$ ,  $\cdots$ ,  $a_1$ ,  $a_0$ , and a real number x, compute the value of the polynomial

$$P_n(x) = a_n x^n + a_{n-1} x^{n-1} + \cdots + a_1 x + a_0.$$

Motivation: different approaches to the inductive step may result in algorithms of very different time complexities.

- Let  $P_{n-1}(x) = a_{n-1}x^{n-1} + \cdots + a_1x + a_0$ .
- Induction hypothesis (first attempt) We know how to evaluate a polynomial represented by the input a<sub>n-1</sub>, ..., a<sub>1</sub>, a<sub>0</sub>, at the point x, i.e., we know how to compute P<sub>n-1</sub>(x).
   P<sub>n</sub>(x) = a<sub>n</sub>x<sup>n</sup> + P<sub>n-1</sub>(x).

(日) (周) (三) (三) (三) (000

Induction hypothesis (second attempt) We know how to compute P<sub>n-1</sub>(x), and we know how to compute x<sup>n-1</sup>.

• 
$$P_n(x) = a_n x(x^{n-1}) + P_{n-1}(x).$$

Algorithms 2016 5 / 29

• Let 
$$P'_{n-1}(x) = a_n x^{n-1} + a_{n-1} x^{n-2} + \dots + a_1$$
.

# Induction hypothesis (final attempt) We know how to evaluate a polynomial represented by the coefficients a<sub>n</sub>, a<sub>n-1</sub>, ..., a<sub>1</sub>, at the point x, i.e., we know how to compute P'<sub>n-1</sub>(x).

• 
$$P_n(x) = P'_n(x) = P'_{n-1}(x) \cdot x + a_0.$$

Yih-Kuen Tsay (IM.NTU)

$$\left\{ egin{array}{l} P_0'(x) = a_n \ P_i'(x) = P_{i-1}'(x) \cdot x + a_{n-i}, \ ext{for} \ 1 \leq i \leq n \end{array} 
ight.$$

Yih-Kuen Tsay (IM.NTU)

#### **Maximal Induced Subgraph**

#### Problem

Given an undirected graph G = (V, E) and an integer k, find an induced subgraph H = (U, F) of G of maximum size such that all vertices of H have degree  $\geq k$  (in H), or conclude that no such induced subgraph exists.

## **Maximal Induced Subgraph**

#### Problem

Given an undirected graph G = (V, E) and an integer k, find an induced subgraph H = (U, F) of G of maximum size such that all vertices of H have degree  $\geq k$  (in H), or conclude that no such induced subgraph exists.

Design Idea: in the inductive step, we try to remove one vertex (that cannot possibly be part of the solution) to get a smaller instance.
